

Melbourne hosts the AFAC Conference and Exhibition this year.

AFAC is:

- The peak body for Australasian fire, land management and emergency services, creating synergy across the industry,
- A good source of incident management expertise, actively engaged in emergency management and working across all industries and sectors,
- Leading in managing risk, preparing for and responding to emergencies.

If you have decided to attend the Exhibition then please visit us at Stand 13 where we shall display components of the mobile Hytrans high volume pumping system. The main components that you can discover are the [hose recovery unit](#), [hydraulic submersible pump](#) and the low profile [squeeze ramp](#) for large diameter hose.

CFA Scoresby Station has just taken delivery of a brand new Hose Layer and Hose Recovery system for 2 km of 4 inch hose. Come and discuss how Scoresby will lay hose at speed of up to 40km / hr and recovery the 2,000 metres of hose in approximately 1 hour.

How fire brigades can extinguish massive industrial fires is explained on the Buncefield poster below. Click [here](#) for a larger image.

Please click [here](#) to receive more information, visit the [FFT website](#) or contact Justin Bear at +61 2 9091 0360
