

## When they need heaps of it in VIC.....

Above ground water supply system delivered.

All of the hose has gone....

100 fire fighters were deployed

When lightning struck and the call came, the CFA had just evaluated deployment options for the Somerton woodpile site. Lots of water was needed but it needed to come from a considerable distance and partly even from across the Hume Highway.

The Scoresby Hytrans Hoselayer quickly deployed 3 different hose lays for a total of 2,300m of 100 mm hose. Powered by multiple CFA pumpers over 12,000 lit/min were pumped to the site to feed the aerial and other appliances for 7 days.

Many lengths of large diameter hose were essential in quickly getting enough water to this raging fire.

The large yellow 100mm hose provides water from different sources
