

Hose Recovery goes AUTO.....

In the time of autopilots, cruise control, self-parking cars and pizza delivery drones, large diameter hose recovery has gone automatic.

The hardest job will be to decide which hand to use for the remote.

The AutoFlaker 300 is engineered to automatically recover large diameter flexible hose in size from 200mm / 8" to 300mm / 12".

Gone is the need for large water supply systems to chase extra helpers to recover the large diameter hose after an incident, training or an exercise.

Training exercises can now be full scale, all the time.

Better training is better prepared.
